

Souvik Ghosh

Full stack Ai native Engineer

 xandersavy@gmail.com  +91 8981430140  Kolkata, India  xandersavy.github.io/  souvik-g-4ba0a7190

 xandersavy

Automation QA Engineer with over 3 years of experience in designing and developing scalable test automation frameworks for enterprise applications. Experienced in Selenium, Playwright, Java, REST Assured, Cucumber, TestNG, Salesforce, and CI/CD pipelines. Proven track record of building automation frameworks from scratch, reducing regression execution time by over 50%, and improving release quality for large-scale enterprise clients. Passionate about software quality, test architecture, and continuous improvement.

PROFESSIONAL EXPERIENCE

IBM Consulting, SDET - FullStack Automation April 2023 – Present
Johnson & Johnson (Salesforce Experience Cloud & Health Cloud)

- Led the migration of the UI automation framework from Selenium to Playwright, improving execution speed, stability, and maintainability.
- Architected Agentic QA workflows leveraging Playwright, Salesforce DX, and Figma MCP alongside custom tool and agent configurations in IBM BOB, GitHub Copilot, and Claude to drive intelligent test creation, design-to-code validation, and automated regression testing.
- Automated 250+ end-to-end test cases covering Salesforce Experience Cloud and Health Cloud workflows.
- Developed reusable Salesforce automation utilities including SOQL and SOSL helpers, authentication modules, synchronization libraries, and reporting components.
- Built internal engineering tools and Python utilities for referential integrity validation, execution summary generation, custom Microsoft Word report generation, and automation workflow improvements.
- Contributed to Lightning Web Components (LWC) development by implementing bug fixes and supporting feature enhancements.
- Integrated automated regression suites into Jenkins and GitHub Actions CI/CD pipelines.

- AT&T Business (Spring Boot Microservices)
- Automated 100+ production defect fixes and regression scenarios across enterprise telecom microservices.
 - Designed automation for REST, SOAP (WSDL), and GraphQL APIs using Java, TestNG, and REST Assured.
 - Built reusable API automation libraries, internal engineering tools, and common utilities to accelerate automation development and improve framework maintainability.
 - Configured and maintained Jenkins CI/CD pipelines for non-production environments.
 - Assisted in migrating Spring Boot microservices to newer Java and MongoDB versions while validating compatibility and application stability.
 - Executed and validated scheduled batch jobs supporting downstream business workflows.
 - Investigated production issues using Linux environments and Kubernetes logs, collaborating with developers on root cause analysis.

EDUCATION

B.Tech in Electronics & Instrumentation Engineering, *Narula Institute of Technology* July 2018 – June 2022 | Kolkata

TECHNICAL SKILLS

Programming Java, JavaScript, TypeScript, SQL	UI Automation Selenium WebDriver, Playwright	API Automation REST Assured, REST APIs, SOAP (WSDL), GraphQL	Frameworks TestNG, Cucumber, JUnit
CI/CD Jenkins, GitHub Actions, Maven	Databases MySQL, MongoDB	Tools Postman, JMeter, Docker, Podman, Git, GitHub, Salesforce	Methodologies Agile Scrum, SDLC, STLC, Test Strategy, Regression Testing, API Testing, Cross Browser Testing

CERTIFICATIONS & BADGES

- IBM Generative & Agentic AI QA - Intermediate 
- Claude Partner Badge - Claude Code 
- ISTQB Certified Tester Foundation Level (CTFL)
- Bobathon Innovator 

ACHIEVEMENTS

IBM Successful Deal Signing Award, IBM 2025
Recognized with the IBM Successful Deal Signing Award and a cash award for outstanding contributions to securing a major deal with Johnson & Johnson in Q2 2025.

IBM Growth Award, IBM
Received the IBM Growth Award 2025 for demonstrating outstanding technical initiative, team collaboration, and dedication to strategic project execution.

PROJECTS

- AI Powered Playwright Automation using IBM BOB - Client POC**
- Designed and implemented an AI assisted Playwright automation solution integrated with IBM BOB through the Model Context Protocol (MCP).
 - Implemented self healing capabilities to automatically recover from locator changes, improving test suite stability and reducing maintenance.
 - Leveraged AI assisted code generation while maintaining human validation and review for enterprise quality standards.

- TestResultMaker**
- Developed a desktop application to generate professional QA execution reports.
 - Automated document generation for manual testing teams, significantly reducing reporting effort.
 - Designed an intuitive interface for efficient report creation.
 - TestResultMaker
